		Louisiana	1088 cms		
		Carolina	1088 cms		

ANNUAL SERVICE

Caution: To qualify for the factory backed warranty your caravan must be serviced/moisture tested by an approved Bailey Service Centre every 12 months (or within 6 weeks of each anniversary of purchase) in accordance with the NCC recommended service schedule and the following moisture test.

STANDARD DAMP CHECK FOR TOURING CARAVANS

Caution: The following damp check must be carried out every 12 months by a Bailey Caravans approved repair centre.

Equipment

A calibrated damp meter should be used which should comply with the minimum specification laid down below.

Measurement range 6% to above fibre saturation in wood
(to nominal 100%)

Resolution $\pm 0.1\%$

Operating Temperature
Range -10 to + 45°C

The meter should be fitted with an adjustable audible alarm and be battery powered.

Method

Readings should be taken in each position marked on Diagram 1. Care should be taken when readings are made to ensure that

readings are accurate. It is important to make sure that probes are free of moisture and the surface being checked is free from condensation.

All readings should be taken in a position where the holes created by the meter's probe are not visible, ie behind rubber seals, in bedboxes or in cupboards.

Results

Readings between 0 - 20% are considered acceptable.

Readings greater than 20% will identify areas needing further investigation and possibly remedial work.

THERMAL INSULATION HEATING GRADE

All Bailey caravans are manufactured and approved by the National Caravan Council to EN1645-1 thermal insulation and heating classification grade 2 - This has been approved using the Truma space heater running on gas as the heating method.

The 230 volt heating system in Ranger, Pageant and Senator should be used as a supplementary or spring/summer heating system and does not comply with grade 2 EN1645-1.

Grade 2 is classified as being able to achieve an average temperature difference of 20°C between inside and outside the caravan when the outside temperature is 0°C.

Recommended annual moisture test
